Structure

- Turnover Taxes: An Interim measure?
- Objectives, aims, legal basis of the EU Proposal
- Taxable revenues and taxable person
- Place of Taxation and Revenue Allocation
- Calculation and Tax Rate
- Discussion Points

Turnover Taxes: An Interim measure?

- Economy digitalized now existing rules cannot deal with!
- BEPS AP1 considered this issue 3 options:
 - Digital PE
 - Withholding taxes
 - Equalization levy (turnover taxes)
- Equalization levy equal treatment of foreign, domestic suppliers – could be targeted to digital transactions – various options provided (digital platforms v. value contributed by users; only low tax v. credit against CIT)

Turnover Taxes: An Interim measure?

- India first mover in 2016 equalization levy enacted
- 6% levy on NR service providers 'specified services' received by Indian business or separate NR Indian PE
- As of today, only advertising services covered may be extended per news reports
- Exemption where service provider PE in India, de minimis threshold (USD 1500) for non-business payments
- Deducted, paid by recipient, exempt from income tax

Objectives, aims, legal basis of the EU Proposal

- Commission need for rejigging corp tax rules digital economy – international, long term solution preferred
- But long term solutions take time unilateral measures in place or planned in 10 Member States
- Unilateral solutions further fragment single market, distort competition – harmonized 'interim' solution needed – also claim for consistency with "subsidiarity"
- Targeted measure revenues supply of digital services

Objectives, aims, legal basis of the EU Proposal

- Aims:
 - Protect integrity of internal market proper functioning
 - Tax bases not eroded public finances in EU sustainable
 - Social fairness level playing field for all businesses in EU
 - Fight ATP digital companies no tax where value created
- Proportionality set common structure flexibility for administrative aspects

Objectives, aims, legal basis of the EU Proposal

- Legal basis Art. 113 addressing indirect taxes, requiring unanimity – "adopt provisions for the harmonisation ofindirect taxation to the extent...necessary to ensure the establishment and the functioning of the internal market and to avoid distortion of competition"
- Fragmentation reason stated for competence but natural when State sovereignty – not clear how making functioning better since barriers created; not clear how preventing distortion of competition

Taxable revenues and taxable person

- Targeted tax services where there is user value creation (advertising, collection/sale of data) or services allowing interaction of users for exchange of goods/services – user role more complex, monetizing user input – tax!
- Gross revenue from following situations included:
 - Placing ads on websites, software or apps (incl. 3rd party ads);
 - Providing a digital platform users can find/interact with other users may also facilitate supply of goods/services b/w them
 - Transmission of user data collected websites, softwares, apps
- Google Adsense, Uber/AirBnB, Facebook all covered!

Taxable revenues and taxable person

- Mere payment or communication services through digital interface – excluded – dependant on support software!
- E-commerce transactions, involving sales; intraconsolidated group transactions – outside scope
- If main purpose of making available own interface supply digital content to users – excluded (only user-user)
- Taxable person accrual thresholds single entity/group:
 - Total worldwide revenues exceed EUR 750 million per yr
 - Total EU revenues exceed EUR 50 million per yr

Place of Taxation and Revenue Allocation

- Taxable revenues deemed obtained member State where users are located:
 - For ad services, State where member sees ad on device;
 - For digital platforms, State where users use a device and concludes underlying transaction or if not covered, State where user opens account allowing access to interface;
 - For data transmission, if data generated from device in State used to access website, software etc. and then transmitted the same tax year

Place of Taxation and Revenue Allocation

- Revenue allocation divided again by type of service:
 - For ad services, proportion of total revenues attributed to the number of times an ad appears on device in State
 - For digital platforms, proportion of total revenues attributed to number of users concluded underlying transactions in State; where not applicable, number of users opened account in State allowing access
 - For data transmission, proportion of total revenues to number of users – data generated & transmitted – having used a device in State to access

Calculation and tax rate

- DST chargeable on proportion of taxable revenues obtained in one tax period by a taxable person as calculated per the Directive – due 1 day after end of period;
- 3% rate applicable for DST
- One stop shop system one State find taxpayer, collect tax, allocate tax

Discussion points

- Legal basis Art. 113 questionable same as ATAD re: claims of improving functioning of market, competition
- How to measure 'value creation'? Why always user State even if just interacting in platform?
- If yes, why exclude certain other businesses (Amazon etc.) where users play key role as well?
- Also applicable in domestic cases prevent EU law concerns – hard to see "equalization" from a turnover tax

Discussion points

- Is the allocation fair? For some digital platform services, place where users use account and conclude transaction not fair. For eg. AirBnB – what if property in 3rd State? – going beyond immovable property taxation norms!
- How about travelling users? For example, if a user makes an AirBnB booking while on a train from Austria to France via Germany; but booking, payment while in Germany?
- What if digital PE agreed on? How to dismantle tax?
 Biggest fear temporary measures are never temporary!
